Sequence 10, Application US/08482728A

Patent No. 596802

GENERAL INFORMATION:

APPLICANT: Wang, Bruce
APPLICANT: Pisher, Donald

TITLE OF INVENTION: No. 5968802el Nuclear Cyclophil:
NUMBER OF SEQUENCES: 21

CORRESPONDENCE ADDRESS:
ADDRESSEE: Flehr, Hobbach, Test, Albritton
APPLICANT: Payan, Donald

TITLE OF INFORMERS: 21

CORRESPONDENCE ADDRESS: 34

ADDRESSEE: Flehr, Hobbach, Test, Albritton
ATTRET: Four Embarcadero Center, Suite 3400

CITY: San Francisco
STATE: California
COUNTRY: United States

COMPUTER: BARCHIN Release #1.0, Version #1.30

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/482,728A
FILING DATE: 07-UN-1995

CLASSIFICATION NUMBER: A-61230/DUB/RMS
TELECOMMUTICATION INFORMATION:
REFERENCE (415) 399-3249

TELEFAX: 910 277299

INFORMATION FOR SEQ ID NO: 10:
SEQUENCE CHARACTERISTICS:
LENGTH: 126 amino acids

Patent No. 6783961

GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Duclert, A.B.
APPLICANT: Glordano, J.Y.
TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
Patent No. 6783961
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

Patent No. 6703491

GENERAL INFORMATION

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 47949, Application US/09270767

Patent No. 6747137

GENERAL INFORMATION:

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.132

FILE REFERENCE: 107196.132

PRIOR PELLOATION NUMBER: US 60/074,725

PRIOR PELLOATION NUMBER: US 60/074,725

PRIOR PELLOATION NUMBER: US 60/096,409

PRIOR FILING DATE: 1998-02-13

PRIOR PELLOATION NUMBER: US 60/096,409

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 19779
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Sequence 1956, Application US/09248796A

Pacent No. 6747137

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Keith Neinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICA
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.132
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT FILING DATE: 1999-02-13
PRIOR FILING DATE: 1999-02-13
PRIOR FILING DATE: 1998-08-13
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 19586

Patent No. 6673549

GENERAL INFORMATION:
APPLICANT: Buchbinder, Jenny

TITLE OF INVENTION: GENES EXPRESSED IN C3A LIVER CELL CULTURES TREATED WITH STEROIDS
FILE REFERENCE: PA-0041 US

CURRENT APPLICATION NUMBER: US/09/976,594

CURRENT FILING DATE: 2001-10-12
                                                                                                                                                                     FOR DIAGNO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence Seq

Sequence 10, Application US/09806399

Patent No. 6638737

GENERAL INFORMATION:

APPLICANT: DERKY, PATRICK M.F.

TITLE OF INVENTION: PEPTIDYL PROLYL CIS-TRANS ISOMERASES

TITLE OF INVENTION: PEPTIDYL PROLYL CIS-TRANS ISOMERASES

FILE REPERRENCE: 078883/0128

CURRENT APPLICATION NUMBER: US/09/806,399

CURRENT APPLICATION NUMBER: PCT/1899/01669

PRIOR PILING DATE: 1999-09-30

PRIOR APPLICATION NUMBER: GB 9821198.0

PRIOR PILING DATE: 1999-09-30

NUMBER OF SEQ ID NOS: 12

SOFTWARE: PATENTIN VET. 2.1
APPLICANT: MADRID, SUSAN M.

Sequence 9, Application US/08142897
Patent No. 5447852
GENERAL INFORMATION:
APPLICANT: Friedman, Jeffrey S.
APPLICANT: Weissman, Irving L.
TITLE OF INVENTION: No. 5447852el Cyclophilins, Associating Proteins
TITLE OF INVENTION: and Uses
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSEE: Tracy J. Dunn
STREET: One Market Plaza, Steuart Tower, Suite 2000
CITY: San Francisco
STATE: California
CONNTRY: USA
                                                                                                                                                                                                                                                                                   ö

Patent No. 5821107

GENERAL INFORMATION.

GENERAL INFORMATION.

APPLICANT: CARLOW, CLOTILDE K.S.

APPLICANT: PAGE, ANTONY

ITILE OF INVENTION: METHOD FOR IDENTIFYING ANTI-PARASITIC

ITILE OF INVENTION: COMPOUNDS

NUMBER OF SEQUENCES: 21

GORRESPONDENCE ADDRESS:

ADDRESSEE: GREGORY D. WILLIAMS; NEW ENGLAND BIOLABS, INC.

STREET: 32 TOZER ROAD

CITY: BEVERLY

CITY: BEVERLY
